

Warehouse Operations and Shipping Procedures Manual

MAN-OPS-2025 | Logistics & Fulfillment Team

1. Warehouse Operations Overview

This manual specifies the operational workflows and safety regulations for inbound logistics, inventory sorting, item picking, packing, and shipping across our network.

2. Shipping & Dispatch Procedures

Orders must be picked using automated picking lists. Item barcodes must be scanned at the dispatch station to update database levels immediately.

Fulfillment packers must use standardized cartons and eco-friendly packing paper. All outbound boxes must be sealed and placed on carrier pallets by 4:00 PM local time to meet carrier SLA departure windows.

3. Carrier Coordination

Any delay in carrier handoffs or shipping congestions must be logged in the system to enable dynamic shipping estimation updates on the customer storefront.
